CYLINDRICAL BRUSH SCRUBBER

MOST VERSATILE – FROM WALL TO WALL AND INTO THE TIGHTEST CORNERS.

Clean virtually any floor surface. Not only carpets, hardwood, and profiled ceramics but grouted tile, rubberized floors – including uneven floors and escalators – are no obstacle for the Duplex.

Especially effective in cleaning tile grout and non-slip floors and carpet, the Duplex is incredibly light and maneuverable - no hard pushing, pulling and lifting.

Simply fill the solution tanks and squeeze the trigger to feed cleaning solution on to the twin counter-rotating brushes that scrub surfaces with aggressive action. Twin conveyors lift the dirt-filled solution from the brushes to a central recovery tank or you can choose to double scrub the area and pick up the water later. The brushes and drive unit are offset, so they work right to the edge of the machine and into difficult areas.

Duplex's remarkable performance is the result of its unique 800,000 bristle design. Its brushes, counter-rotating at 780 rpm, actively lift dirt, water and grime from the floor surface.

Brush options include 2 grades of black brushes for regular or aggressive scrubbing. Grey is the standard all-purpose brush and yellow is for sensitive carpet areas.

- EFFICIENT • HYGIENIC • LESS EFFORT •

THE HEART OF DUPLEX

At the squeeze of the trigger, dual large capacity clean solution tanks dispense liquid evenly along the full length of both agitator brushes.

Simultaneously, twin conveyors lift the dirt filled solution from the brushes to a central recovery tank. The Duplex system washes,
